EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Maurina F. Cunningham (38,419) on 10/20/06.

The application has been amended as follows:

IN THE SPECIFICATION:

The abstract has been replaced by the attached abstract.

The above change to the specification has been made to shorten the abstract.

REASONS FOR ALLOWANCE

The instant invention is deemed to be directed to an unobvious improvement over the invention patented in U. S. Patent No. 2,103,103 to Waters. The improvement comprises a piston mechanism with diverging pistons, wherein all guide channels are provided with through-cuts in the working surface of the cylinder with outlets into its cavity so that lateral faces of the connecting rods of the synchronous groups of the different directions facing the cavity of the cylinder form movable parts of its working surface and the pistons are sequentially attached by their peripheries to the lateral faces of the connecting rods of the different synchronous groups,

forming working chambers between them for the purposes of providing a higher power-weight ratio and different strokes of independent working cycles to be performed simultaneously.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

PRIOR ART

The patent to Waters is cited for the showing of a piston mechanism with diverging pistons similar to applicant's but lacking guide channels provided with through cuts.

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consists of four patents.

Bowman, Thomas, Ingram, and Pichoud are cited to show piston mechanisms with diverging pistons.
